

Skill Arena - Phase 4 Master Overview

Security, Anti-Cheat, Fraud Prevention & Infrastructure Protection Architecture

Phase 4 Purpose

Define the complete security architecture protecting users, gameplay, infrastructure, treasury systems and platform operations.

Primary Objective

Ensure the platform remains secure, fair, resilient and resistant to exploitation.

Security Philosophy

Client Trust Level = Zero. Server Authoritative Systems. Zero Trust Architecture. Continuous Verification.

Document 1

Authentication, Session Management & Zero Trust Security Architecture.

Document 2

API Security, Service Security, Infrastructure Security & Network Protection Architecture.

Document 3

Anti-Cheat Engine, Gameplay Validation, Replay Verification & Match Integrity Architecture.

Document 4

Bot Detection, Device Fingerprinting, Multi-Account Detection & Behavioral Security Architecture.

Document 5

Security Operations Center (SOC), Incident Response, Threat Intelligence & Vulnerability Management Architecture.

Core Security Systems

Identity Service, Authorization Service, Security Gateway, Anti-Cheat Engine, Fraud Detection Engine, Device Intelligence Engine and SOC Platform.

Identity & Access Security

Authentication, MFA, Session Security, Role-Based Access Control and Account Recovery.

Infrastructure Security

Network Segmentation, Firewalls, DDoS Protection, Cloud Security and Service Isolation.

Gameplay Security

Server-side validation, anti-cheat systems, replay verification and match integrity controls.

Behavioral Security

Bot detection, risk scoring, anomaly detection and multi-account identification.

Operational Security

24/7 monitoring, incident response, threat hunting and vulnerability management.

Security Monitoring

Real-time monitoring of accounts, gameplay, infrastructure, financial systems and administrative actions.

Audit Architecture

Permanent logging of authentication, gameplay, financial, security and administrative events.

Compliance Support

Security audits, regulatory reviews, investigations and governance requirements.

Expected Outcome

A highly secure gaming ecosystem capable of protecting users, finances, competitions and infrastructure at global scale.

Transition To Phase 5

Phase 5 focuses on Technical Architecture, Backend Services, APIs, Microservices, Game Engines and Platform Infrastructure Design.
